### **F- критерий**

Сравнение двух выборочных дисперсий может быть выполнено с использованием критерия, названного в честь английского статистика Рональда Фишера (1890 - 1968) **F** - критерием. Этот критерий представляет собой отношение выборочных дисперсий  $S^2_1$  и  $S^2_2$ , которые рассматриваются как оценки одной и той же генеральной дисперсии  $\sigma^2$ . Критические значения критерия (**F**) берутся из таблиц **F** - распределения. **F** - распределение зависит от уровня значимости и от числа степеней свободы сравниваемых дисперсий  $d.f._1$  и  $d.f._2$ , с уровнем значимости 0,95.

*(приложение 1 – стр.2 – стр.161).*

Значение F-критерия Фишера при уровне значимости P - 0,05
